

## PROJECT PROFILE

Consulting \* Design/Build \* Installation \* Project Management

### CNET Networks – Multipurpose Room

In addition to boardrooms and training rooms, often businesses have other multipurpose rooms or lobby areas that they wish to incorporate various forms of display technologies into. Such was the case at CNET Networks.

For their multipurpose room the priority was to keep the room flexible, yet incorporate in the basics to allow for audio and multimedia presentations. Ease of use was also important, as many different individuals within the organization would be using the audio-visual system.

The room contains dual electric screens and ceiling mounted projectors. The screens are placed in strategic locations in the room to allow for many different table set-up configurations. Data connections are found in five separate floor locations throughout the room to accommodate these various uses. The room contains both a VCR and DVD player that can be projected onto the screens with the aid of a matrix switcher. A radio frequency tuner is also available to pull in various radio and TV programs. To address audio needs, speakers are mounted on either side of each screen and work in

combination with ceiling speakers to provide adequate audio for the entire room. A wireless 14-inch touchpanel allows the user to control the projector functions and audio levels.

Whether the room is used for company meetings complete with formal presentations, training sessions using videos or informal gatherings, users can be confident they will have the tools needed for a successful meeting. The equipment installed in this room truly makes it a multipurpose room.
