InFocus - Table Rock Executive Boardroom

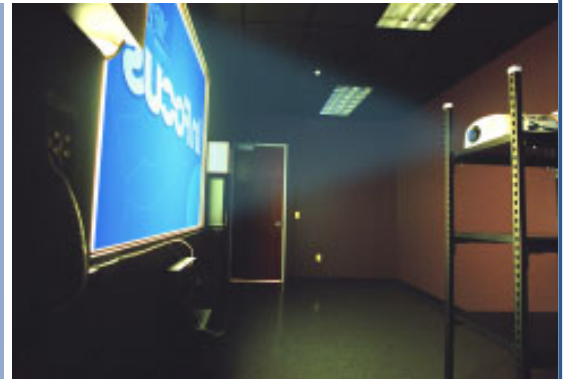

As the worldwide leader in the digital projection industry, InFocus wanted a high-tech, multi-functional boardroom for their executive meetings and presentations. The room required a sophisticated and polished look with the correct tools for productive and efficient meetings.

The finished boardroom is conducive to high impact presentations as well as audio and videoconferencing. Upon entering the room you will see a 5'7" high x 7'6" wide glass rear projection screen. An adjacent projection room houses the InFocus projector on a stand, while an equipment rack located in a separate closet area contains the VCR, DVD player and audio equipment.

The horseshoe shaped table contains computer audio/video connections for users via recessed data/video connection panels hidden by flip up covers. Seven microphones affixed to the table provide speech reinforcement for the boardroom as well as for audio and videoconferencing. The wireless touchscreen control panels located at the wood lectern and on the table allow for control of the projector inputs, audio conferencing system, videoconferencing, as well as lighting and blinds.

- Minnesota TSO0701

To facilitate lighting control, four different lighting presets have been programmed for easy 1-touch control. These lighting presets accommodate videoconference meetings, video playback, computer/projection use, as well as face-to-face meetings.

Other features in the room include a SMART whiteboard and a Tandberg videoconferencing system. The videoconferencing system has presets established so that at a touch of a button the camera can display the entire room, display what is being projected on the screen, or display individuals located around the room. The finished boardroom is a sophisticated and fully-integrated multimedia room for high impact meetings and presentations.
